

Parties are not the only patrons: towards a new typology of patronage

Literature review protocol

The study combined a semi-systematic and an integrative literature review. A systematic review was not feasible because the research project included different areas and broad research questions. Furthermore, it did not seek to give a full account of all research in the field but rather analyse the broad progression in a certain period and propose new methods and theories. In this sense, integrative reviews are especially useful for developing new theoretical frameworks or bringing contributions to previous ones (Snyder, 2019), which makes it more suitable for the research goals:

- i) An overview of connections between studies on bureaucracy, interest groups and lobbying, and public policies.
- ii) Mapping recent studies on political connections of bureaucrats and their interactions with interest groups.
- iii) Reformulating analytical frameworks on patronage and politicisation of the bureaucracy.

The research literature aimed at mapping studies on patronage, politicisation, and political connections of bureaucrats.

Tasks

1. Defining initial search terms x
2. Conducting tests in databases x
3. Refining search terms x
4. Using search terms in different databases x
5. Merging databases in the reference manager x
6. Correcting bibliometric data and checking duplicates x
7. Reading all abstracts x
8. Selecting papers for catalogues based on abstracts x
9. Building final catalogues (divided by themes and relevance to research questions) x

10. Refining search (search terms in other languages, new corrections, reviewing selection) x
11. Downloading full-texts and organising folders x
12. Final adjustments x
13. Analysing the content qualitatively (content analysis) – full texts (codification - integrating concepts) x

BASES:

- Scopus
- Web of Science

Software and tools:

- Mendeley (reference manager/organisation)
- VOSViewer (initial visualisation of bibliometric data)
- R (analysis of bibliometric data)
- NVivo (content analysis)

Screening criteria:

- Theme: politicisation, bureaucracy, interest groups, patronage
- Time: 2000-2022
- Title/abstract language: English
-

Procedures:

Search terms were tested (pilot) in Scopus and Web of Science. Then, the final search terms were chosen based on the proximity of the results with the theme explored – which were analysed to the screening of abstracts and analysis of network maps of co-occurring words through VOSViewer.

The results of all searches were exported from the databases (Scopus and Web of Science) and imported into a reference manager. They were separated into thematic collections, excluding duplicates.

Considering the thematic compatibility (political connections of bureaucrats), 1978 texts were grouped into a single collection (“general collection”). Reading their abstracts allowed the selection of publications focusing on patronage and politicisation. Excluding non-available texts (list below), the final sample had 415 texts.

SEARCH TERMS (ENGLISH)

The study comprised testing different search terms in Scopus and Web of Science. The search terms with their Boolean operators were:

- **BBIGL:** (bureaucracy OR bureaucrats) AND (interest groups OR lobbying)
- **BP:** bureaucracy AND politicisation
- **BPA:** bureaucracy AND patronage
- **BAP:** bureaucracy AND appointments
- **OAP:** (officers OR officials) AND appointments
- **OIGL:** officers OR officials AND interest groups OR lobbying
- **OBIGLP:** officers OR officials OR bureaucrats AND interest groups OR lobbying AND parties
- **CSIGL:** civil servants AND interest groups OR lobbying
- **BUR:** bureaucracy OR bureaucrats (18,412 documents in Scopus / 13,437 documents in WoS)
- **IG:** interest groups OR lobbying (192,106 documents in Scopus / 240,728 documents in WoS)

The search terms were chosen based on previous knowledge of the research literature (concept map) and questions. Based on previous tests, “officers” was the broadest term – it returned more papers than other terms such as bureaucrats and civil servants – but it also brought a greater quantity of non-related materials (works on CEOs and the private sector). Running tests was also essential to verify errors in the software (Mendeley), which were corrected manually (there were many problems with authors’ keywords). The group “officers

or officials and interest groups or lobbying” brought more results (804 documents in Scopus and 2.471 in WoS). Some pilot tests were conducted through VOSViewer with each group of words separately. 144 texts mentioned “patronage”.

TOTAL (QT) – General collection (previous searches + final search): 1,978

Qualitative analysis: >400

Final Collection (Quali analysis)

415 texts (texts not available excluded)

Exclusion criteria for general collection:

- Non-academic materials (newspapers, notes, among others).
- Non-related themes or topics (private sector, other activities rather than those belonging to the policy cycle).
- Generic mentions of the search terms (for instance, public officials were mentioned in the paper because they were interviewed).

Screening criteria for the final catalogue:

- **Period:** Contemporary (studies on past imperial regimes were excluded)
- **Phase:** policymaking, rulemaking, or political appointments
- **Level of Government:** Executive branch, federal agencies, and committees. State-owned enterprises were excluded.
 - o National and regional level (EU). Exceptions: papers focusing on the relationship between IGs and national delegations or the central government and subnational unities, papers with a comparative design
- **Type of bureaucrat:** Intermediate or high-level posts (street-level bureaucrats and armed forces¹ excluded from the quali analysis)
- Comparative studies were prioritised
- **Type of material:** journal articles and chapters (books and reports excluded)
- Although the relationship between politicians and bureaucrats was considered in the analysis, the main focus does not refer to electoral politics.

Challenges in selecting materials:

- Some works do not mention the terms “lobbying” or “interest groups” but approach these phenomena in policymaking. In other cases, authors use these words with no theoretical precision.
- Officials are sometimes mentioned due to their role in policymaking with no further discussion of their functions, characteristics, or political connections.

¹ Except for military servants occupying traditionally civic posts. Police was considered as an armed force.

- The word “policymaker” is often used in studies on lobbying and may refer to either public officers or elected officials.
- Several works just use the search terms generically. For instance, the authors state that they have interviewed officials (but the theme of the paper is not bureaucracy or politicisation).
- Some abstracts do not specify the type of bureaucracy when they mention the term “bureaucrats”. This study refers to government bureaucrats (not partisan bureaucracy).
- Regional and cultural differences: public appointments have another meaning in the UK (the term refers to appointments to boards of public bodies).

Further comments/annotations

- Books: I considered the first date of publication.
- Potential meta-analysis: appointments to federal ministries and agencies / recruitment processes and profile of bureaucrats
